

HTML EXPERIMENTS

Experiment 1: Create a Simple HTML Page

Aim

To create a basic HTML webpage that displays a heading and a paragraph.

Algorithm

1. Start the HTML document using `<!DOCTYPE html>`.
2. Open the `<html>` tag.
3. Create the `<head>` section.
4. Add a `<title>` for the webpage.
5. Open the `<body>` section.
6. Add a heading using `<h1>`.
7. Add a paragraph using `<p>`.
8. Close all the tags properly.

Code

```
<!DOCTYPE html>

<html>

<head>

<title>My First Web Page</title>

</head>

<body>

<h1>Welcome to HTML</h1>

<p>This is my first HTML program.</p>

</body>

</html>
```

Output

The webpage will display:

Welcome to HTML

This is my first HTML program.

Experiment 2: Display Different Headings

Aim

To create a webpage using different HTML heading tags.

Algorithm

1. Start the HTML document.
2. Add the <head> section and webpage title.
3. Inside <body>, add headings from <h1> to <h3>.
4. Add a paragraph explaining HTML.
5. Save and run the program.

Code

```
<!DOCTYPE html>

<html>

<head>

<title>Heading Example</title>

</head>

<body>

<h1>Heading 1</h1>
<h2>Heading 2</h2>
<h3>Heading 3</h3>

<p>HTML is used to create web pages.</p>

</body>

</html>
```

Output

A webpage displaying three headings with different sizes and a paragraph.

Experiment 3: Create Ordered and Unordered Lists

Aim

To create ordered and unordered lists in HTML.

Algorithm

1. Start the HTML document.
2. Add a heading for programming languages.
3. Create an unordered list using .
4. Add list items using .
5. Add another heading for steps.
6. Create an ordered list using .
7. Save and run the file.

Code

```
<!DOCTYPE html>

<html>

<head>

<title>List Example</title>

</head>

<body>

<h2>Programming Languages</h2>

<ul>
<li>Python</li>
<li>Java</li>
<li>C++</li>
<li>JavaScript</li>
</ul>

<h2>Steps to Learn HTML</h2>
```

```
<ol>
<li>Learn HTML tags</li>
<li>Create simple webpages</li>
<li>Add images and links</li>
<li>Practice projects</li>
</ol>
```

```
</body>
</html>
```

Output

The webpage will show:

- A bullet list of programming languages
 - 1. A numbered list of steps to learn HTML

Experiment 4: Insert Image and Hyperlink

Aim

To insert images and hyperlinks in a webpage.

Algorithm

1. Start the HTML document.
2. Add a heading for a website link.
3. Insert a hyperlink using <a> tag.
4. Add another heading for image.
5. Insert an image using tag.
6. Specify width and source of the image.
7. Save and execute.

Code

```
<!DOCTYPE html>
<html>
<head>
<title>Image and Link</title>
</head>
```

```
<body>
```

```
<h2>Visit Website</h2>
```

```
<a href="https://www.google.com">Go to Google</a>
```

```
<h2>Sample Image</h2>
```

```

```

```
</body>
```

```
</html>
```

Output

The webpage will display:

- A clickable link to Google
- An image below the link

Experiment 5: Create a Table

Aim

To create a table showing student details.

Algorithm

1. Start the HTML document.
2. Add a heading for the table.
3. Create a table using <table> tag.
4. Use <tr> for rows.
5. Use <th> for table headings.
6. Use <td> for table data.
7. Insert multiple rows of student details.
8. Save and run the file.

Code

```
<!DOCTYPE html>

<html>

<head>

<title>Student Table</title>

</head>
```

```
<body>
```

```
<h2>Student Details</h2>
```

```
<table border="1">
```

```
<tr>
```

```
<th>Name</th>
```

```
<th>Roll No</th>
```

```
<th>Course</th>
```

```
</tr>
```

```
<tr>
```

```
<td>Rahul</td>
```

```
<td>101</td>
```

```
<td>B.Tech</td>
```

```
</tr>
```

```
<tr>
```

```
<td>Anita</td>
```

```
<td>102</td>
```

```
<td>M.Tech</td>
```

```
</tr>
```

```
<tr>
```

```
<td>John</td>
```

```
<td>103</td>
```

```
<td>BCA</td>
```

```
</tr>
```

```
</table>
```

```
</body>
```

```
</html>
```

Output

A table displaying student details with three columns: Name, Roll No, and Course.

Experiment 6: Create a Student Registration Form

Aim

To design a simple HTML form for student registration.

Algorithm

1. Start the HTML document.
2. Add a heading for registration.
3. Create a form using <form> tag.
4. Add input fields for name and email.
5. Add radio buttons for gender selection.
6. Add a dropdown list for course selection.
7. Add a submit button.
8. Save and execute.

Code

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>Registration Form</title>
```

```
</head>
```

<body>

<h2>Student Registration Form</h2>

<form>

Name:

<input type="text">

Email:

<input type="email">

Gender:

<input type="radio" name="gender"> Male

<input type="radio" name="gender"> Female

Course:

<select>

<option>B.Tech</option>

<option>M.Tech</option>

<option>BCA</option>

</select>

<input type="submit" value="Register">

</form>

```
</body>
```

```
</html>
```

Output

A webpage showing a **student registration form** with input fields, radio buttons, dropdown menu, and a submit button.

Design a College Information Webpage Using Basic HTML Elements

Aim

To design a simple **College Information webpage** using basic HTML elements such as headings, paragraphs, lists, tables, images, hyperlinks, and forms.

Algorithm

1. Start the HTML document using `<!DOCTYPE html>`.
2. Open the `<html>` tag.
3. Create the `<head>` section and give a title for the webpage.
4. Open the `<body>` section.
5. Add a main heading for the college webpage.
6. Create an **About College section** using a paragraph.
7. Add a **Courses Offered section** using an unordered list.
8. Create a **Faculty Details table** using `<table>`, `<tr>`, `<th>`, and `<td>`.
9. Insert a **college image** using the `<img>` tag.
10. Add a **hyperlink** to visit the college website.
11. Create a **Student Enquiry Form** using the `<form>` tag.
12. Add input fields for name, email, course, and message.
13. Add a submit button.
14. Close all HTML tags properly.
15. Save the file with `.html` extension and open it in a web browser.

Code

```
<!DOCTYPE html>
```

```
<html>
```

<head>

<title>Model Engineering College</title>

</head>

<body>

<h1>Government Model Engineering College</h1>

<h3>Thrikkakara, Kochi, Kerala</h3>

<h2>About Our College</h2>

<p>

Model Engineering College was established in 1989 and is located in Thrikkakara, Kochi.

The college is affiliated to APJ Abdul Kalam Kerala Technological University and is

managed by the Institute of Human Resource Development (IHRD), Government of Kerala.

The institution offers undergraduate, postgraduate and research programs in engineering

and technology. The campus promotes innovation, research, and holistic student

development with modern laboratories and experienced faculty members.

</p>

<h2>Departments</h2>

Computer Engineering

Electrical Engineering

Electronics Engineering

Mechanical Engineering

Biomedical Engineering

Applied Sciences

Student Enquiry Form

<form>

Name:

<input type="text">

Email:

<input type="email">

Department:

<select>

<option>Computer Engineering</option>

<option>Electrical Engineering</option>

<option>Electronics Engineering</option>

<option>Mechanical Engineering</option>

<option>Biomedical Engineering</option>

</select>

Message:

<textarea></textarea>

<input type="submit" value="Submit">

</form>

</body>

</html>

Output

The webpage displays:

- **College name as main heading**
 - **About the college paragraph**
 - **List of courses offered**
 - **Faculty details in a table**
 - **College image**
 - **Website hyperlink**
 - **Student enquiry form**
-
